

# Senior Software Engineer

## About JustHealth

JustHealth is a dynamic healthcare startup on a mission to radically improve cancer care. Too often, patients are overwhelmed by their diagnosis, often feeling left alone and helpless. Despite best intentions, care teams often already operate at their capacity limit, handicapped by outdated tools and burdensome administrative processes.

We are driven by a belief that the time is now for a patient centric, continuous and holistic care experience that addresses both the needs of patients and their care teams. We develop state of the art, clinically validated, digital tools and programmes to facilitate effective monitoring and personalized support programmes.

We are a team of experienced builders, change makers and healthcare practitioners. We already work with some of Germany's leading cancer clinics. Our journey is just getting started and we are looking for like minded people to join JustHealth on this exciting mission.

## Position Description

We are looking for a Senior Software Engineer to join our mission-driven team. As one of the first engineering hires, you will play a pivotal role in building and scaling our digital health products. This is a high-impact position where your contributions will directly shape the future of cancer care.

This is a remote-first role, but we encourage occasional in-person collaboration at our headquarters in Munich.

## Responsibilities

- **Software Development:** Lead the end-to-end development of OnkoPass, ensuring high-quality, scalable, and maintainable code across web and mobile platforms.
- **Deployment & Maintenance:** Own the full lifecycle of the application, from development to deployment and ongoing maintenance, ensuring reliability and performance.
- **Process Improvements:** Participate in a continuous evaluation and enhancement cycle, identifying opportunities to improve efficiency, security, and scalability.
- **Innovation & Contribution:** Bring your ideas to the table - whether it's about architecture, new technologies, or better ways to support patients and care teams.
- **Collaboration:** Work closely with product managers and designers to translate user needs into intuitive digital solutions.

## Requirements

- You have a proven track record of developing and deploying cross-platform mobile applications and web apps.
- Experience with our core technologies, including Typescript, React Native, React.js, Prisma, Postgres, GraphQL and AWS. Deep experience in at least a few of these areas is expected.
- A self-starter mindset, eager to take ownership and shape the technical foundation of a growing startup.
- Based anywhere in the European Union and willing to travel to our headquarters in Munich twice a year.
- Strong communication skills and fluency in English.

## What we offer

- **Meaningful Work:** Develop innovative digital health solutions that directly improve cancer care, making a real-world impact.
- **Visible Impact:** See the results of your work in action, shaping cutting-edge products used by healthcare professionals and patients.
- **Flexibility & Autonomy:** Enjoy control over your schedule while ensuring alignment with your team and project needs.
- **Remote-First Environment:** Work from anywhere in the EU with modern collaboration tools to stay connected.
